

### WEFTEC Press Release

Weir Specialty Pumps of Salt Lake City, Utah is pleased to announce it has reached a formal Strategic Alliance Agreement with Liquid Dynamics (JetMix) and Beaudrey USA.

The agreement with Liquid Dynamics joins Weir Specialty Pumps Chop-Flow line of chopper pumps with the JetMix system of mixing equipment. Both companies are committed to bringing the best products available to serve the needs of customers all over the world in a cost effective and dependable manor. In combining of these USA based companies we offer a single source responsibility of the full line of process mixing and pumping systems. Backed by a combined 65 years of experience in the market, our present and future customer base will continue to rely upon. Chop-Flow Pumps compliment the JetMix Mixing System with the most recent technology of chopper pumps. The agreement was recently signed by Mr. Joe Roark, President of Weir Specialty Pumps and Mr. Mark Crump, President of Liquid Dynamics.

In a separate signing ceremony another Strategic Alliance was forged between Weir Specialty Pumps and BEAUDREY USA. This alliance was created to fill the need for products to reduce aquatic life kills in power plant water intake structures. EPA 316B mandates kill reductions by 80%. When ever a 50MGD plants license comes up for renewal it will be required to comply with 316B. For new power plant construction the threshold is 2MGD for compliance to 316B.

The only technology recognized by EPA as able to comply is the BEAUDREY Screening equipment and the WEMCO Hidrostral pumps. This partnership provides customers access to technology which will work together and solve their requirements
